PhD in Computer Science, I aim to leverage my dual expertise in theoretical modeling and teaching to approach data analysis and AI model building with rigor and clarity. Trained to structure and break down complex problems to extract clear syntheses, I want to turn data into actionable insights that support strategic decision-making in a **Junior Data Scientist role.**

## PROFESSIONAL EXPERIENCE

**Data Scientist,** KeretAI (AI startup, Fleet management) - *Kuala Lumpur, Malaysia* 01/2026 - 07/2026

Design of AI/ML solutions for vehicle fleet management (rentals, taxis, vehicle purchases)

- Computer vision: automatic invoice extraction (**OCR** + entity extraction)
- Data engineering: structuring and cleaning of operational data
- AI Assistant (**RAG**): prototyping of a conversational assistant based on an **LLM** with **Retrieval-Augmented Generation**

**Teaching Assistant**, *Université Paris-Est Créteil* 10/2022 - 10/2025

Designed and taught computer science and mathematics courses for groups of 30 students.

- Data and Artificial Intelligence: **Data analysis and predictive models (ML, LLM, NumPy, Pandas, Scikit-learn)**
- Learning and game theory: **Machine Learning**, **NLP**, **GAN**, genetic algorithms, etc.
- Object-Oriented Programming, Distributed Algorithms, Algorithmic Complexity, Mobile Programming, Computer Architecture, etc.

**PhD Candidate**, *Université Paris-Est Créteil* 10/2022 - 10/2025

***Author of 4 publications in international conferences and journals.***

**Research Assistant**, *Université Gustave Eiffel* 01/2022 - 09/2022

Literature review, documentation writing, and **contributions to the open-source software SageMath.**

**Internal Consultant,** *Engie* 05/2021 - 09/2021

Assignment focused on digitizing, automating and optimizing internal processes for business teams.

**Internal Consultant,** *Val-de-Marne Prefecture* 05/2020 - 09/2020

Assignment focused on digitizing, automating and optimizing internal processes for business teams.

## PERSONAL PROJECTS

**Jungle assist -** End-to-end Python pipeline: Riot API ingestion and collection of 12,482 matches via snowball sampling (SQLite), XGBoost win-prediction model, data leakage detection and correction, SHAP analysis, and game plan generation with the Claude API.

**JEM Ticket Prioriser -** Prioritised 21,000 real Mozilla bug reports with a Joint Energy-based Model (PyTorch, Langevin dynamics): same accuracy as a standard MLP, plus detection of atypical tickets (AUROC 0.70 vs 0.31). Experiment tracking and Model Registry with MLflow, command-line triage tool.

**CampaignLift -** Causal analysis of a randomised e-mail campaign (64,000 customers): A/B tests, power analysis and uplift models (XGBoost T-learner, Qini). Delivered an ROI-quantified recommendation (+$18,100 profit per 100,000 customers, ROI ≈ 3.6), packaged as a tested Python tool.

## EDUCATION

**PhD in Computer Science and Mathematics,** *Université Paris-Est Créteil* 2025

**Parisian Master of Research in Computer Science,** *Université Paris Cité (joint with ENS and CNRS)* 2022

**Bachelor's in Computer Science***, Université Paris Cité* 2020

**Bachelor's in Mathematics***, Université Paris Cité* 2020

## SKILLS

Programming languages: **Python (sklearn, NumPy, pandas, Matplotlib, PyTorch), SQL**, Java, C, Prolog.

Software: **Git**, VSCode, Jupyter Notebook, LaTeX, Excel, Microsoft Office

Data tools: **MLFlow, Power BI, Looker Studio**

Languages: **French (native), English (C2 level)**

Soft skills: Rigor, popularization, adaptability, teamwork, critical thinking, autonomy, communication.
