Ahmed MIMOUNI

DATA SCIENTIST | AI / ML ENGINEER

amimouni.cs@gmail.com · 06 44 14 72 27 · ahmedmimouni.fr

With a PhD in Computer Science and hands-on experience in Data Science and AI, I design and evaluate models to address real-world challenges, from Machine Learning to generative AI. My research and development background enables me to combine modeling, experimentation and critical analysis to turn complex data into actionable results.

PROFESSIONAL EXPERIENCE

Data Scientist, KeretAI, AI and fleet management startup, *Kuala Lumpur, Malaysia* 01/2026 - 07/2026

Designed AI and Machine Learning solutions for automotive fleet management.

- **Computer vision**: automated invoice **data extraction** using OCR and entity extraction.
- **Data engineering** : structured and **cleaned operational data.**
- **AI assistant** : prototyped an **LLM-powered conversational assistant using RAG.**

Teaching Assistant, Paris-Est Créteil University 10/2022 - 10/2025

Designed and taught computer science and mathematics courses for groups of 30 students.

- **Data and AI**: data analysis, predictive modeling, ML, NumPy, pandas, scikit-learn, NLP, LLMs, GAN, genetic algorithms, and others.
- Object-oriented programming, distributed algorithms, computational complexity, mobile development and computer architecture.

PhD Researcher, Paris-Est Créteil University 10/2022 - 10/2025

Author of **4 publications in international conferences and journals.**

Research Assistant, Gustave Eiffel University 01/2022 - 09/2022

Conducted literature reviews, wrote documentation and contributed to the SageMath open-source software.

Process Automation Developer, Val-de-Marne Prefecture (2020); Engie (2021)

Developed and automated internal processes to improve operational reliability and reduce manual work for business teams.

DATA & AI PROJECTS

CampaignLift | Causal Inference and Uplift Modeling: Measured the causal impact of a randomized email campaign across 64,000 customers using A/B testing and an XGBoost T-learner. Evaluated performance with Qini curves and identified a targeting strategy with an estimated $18,100 profit per 100,000 customers and an ROI of 3.6.

Jungle Assist | Machine Learning and Explainability: Developed an ML pipeline to predict League of Legends match outcomes using 12,482 matches collected through the Riot API and stored in SQLite. Trained an XGBoost model, identified and corrected data leakage, interpreted predictions with SHAP and generated gameplay recommendations through the Claude API.

JEM Ticket Prioritizer | Deep Learning and MLOps: Developed a PyTorch model to prioritize 21,000 Mozilla bug reports and detect atypical tickets. Achieved an anomaly-detection AUROC of 0.70 versus 0.31 for the baseline model. Tracked experiments and managed models with MLflow.

MetroPT Anomaly Benchmark | Time Series and Anomaly Detection: Detected air leaks using seven months of sensor data. Benchmarked five methods, from CUSUM control charts to PyTorch LSTM autoencoders, using chronological validation and event-level evaluation.

SKILLS

Programming and data: Python, SQL, pandas, NumPy, SQLite | Other languages: Java, C, OCaml, Prolog

Machine Learning, Deep Learning and GenAI: classification, predictive modeling, time series, anomaly detection; scikit-learn, XGBoost, PyTorch; LLMs, RAG, OCR and entity extraction

Explainability, MLOps and experimentation: MLflow, Git, model evaluation, causal inference, uplift modeling, SHAP, Qini

Data visualization: Matplotlib, Power BI, Looker Studio

Languages: French (native), English (C2)

EDUCATION

PhD in Computer Science and Mathematics, Paris-Est Créteil University 2025

Parisian Master of Research in Computer Science (MPRI), Paris Cité University, jointly with ENS and CNRS 2022

Bachelor's degree in Computer Science, Paris Cité University 2020

Bachelor's degree in Mathematics, Paris Cité University 2020
